

10 Days MERN Revision Plan

Focused revision roadmap covering JavaScript, React, Node.js, Express, MongoDB, security, system design, and deployment.

Day 1: JavaScript Foundations

var, let, const; scope; hoisting; TDZ; primitive vs reference; == vs ===; this keyword; execution context.

Practice: hoisting examples, object references.

Day 2: Functions + Closures

normal vs arrow functions; callbacks; higher-order functions; closures; currying; IIFE.

Practice: counter closure, curry multiply().

Day 3: Async JavaScript

setTimeout; setInterval; Promise; async/await; event loop; microtasks; callback hell.

Practice: predict output order of async snippets.

Day 4: Advanced JS

debouncing; throttling; deep vs shallow copy; memoization; map/filter/reduce.

Practice: implement debounce(), throttle(), flatten array.

Day 5: React Basics

JSX; components; props; state; useState; useEffect; forms; conditional rendering.

Build: Counter app / Todo app.

Day 6: React Advanced

useMemo; useCallback; React.memo; useRef; Context API; custom hooks; router; lazy loading.

Practice optimization scenarios.

Day 7: Redux

store; reducer; action; slice; Redux Toolkit; async thunk.

Build: Cart management flow.

Day 8: Node + Express

routes; middleware; CRUD APIs; error handling; Helmet; CORS; rate limiting.

Build: Users CRUD API.

Day 9: MongoDB + Auth

schema; model; CRUD; populate; aggregation; pagination; JWT; bcrypt; auth vs authorization.

Build: login/signup API.

Day 10: System Design + Deployment

load balancer; WebSocket; Redis basics; caching; CDN; file upload; env vars; deployment.

Deploy sample MERN app.

Daily Routine Suggestion

2 Hours Theory • 3 Hours Coding • 1 Hour Interview Questions • 1 Hour Build Something

Goal: Finish all 10 days seriously and become job-ready in MERN revision mode.
